

→ Series 851bH

851bH

Safety valves made of
gunmetal, angle-type with
threaded connections

■ SUITABLE FOR

Hot water

■ EXAMPLES OF USE

For the protection of:

- thermostatically protected closed-circuit water heating systems with flow temperatures of up to 120°C for all static heights or rated output above 350 kW according to TRD 721, DIN 4751 and DIN EN 12828. Should the thermostatic limiting and control unit fail, the safety valve has to blow-off the total heating output of the boiler as hot water and steam.
- closed-circuit solar heating plants according DIN 4757-1 und 2 with flow temperatures up to 120°C for all static heights.
- district heating sub-stations, district heating building substations and domestic systems suitable for connection to a hot water district heating network according to DIN 4747-1 and AGFW 505.
- heating systems for building technology and industrial applications
- co-generation plants (CHP)
- biogas plants
- district heating transfer stations, building sub-stations
- solar plants

Safety valves are set and sealed at the factory.

■ MATERIAL

■ SPECIFICATION

1/2" – 2"

– 10°C to + 120°C

0,5 – 25 bar

In order to achieve the highest possible heating output, up to three valves per system can be installed.

To protect indirectly heated heat generators in accordance with DIN 4751 Part 2 the safety valves have to be rated for the flow rate of the expansion water.
For the valid blow-off capacities in m³/h water see capacity chart **851bHF on datasheet 9.9**
